

**National Aeronautics and
Space Administration**

Office of Policy and Plans

Overview of the NASA Strategic Management System

**Matt Crouch
Director of Strategic Planning**

August 2001

NASA Strategic Management System

Presentation Overview

- ▣ NASA Implementation of the Results Act
- ▣ NASA Strategic Management Documents & Schedules
- ▣ NASA Strategic Framework
- ▣ NASA Management Structure & Processes
- ▣ Roadmaps & Performance Planning
- ▣ Bush Government Reform Agenda
- ▣ www.plans.nasa.gov as a Resource

NASA Strategic Management System

Government Performance and Results Act (GPRA)

PURPOSE:

- ❑ Improve the confidence of the American people in the capability of the Federal Government, by systematically holding Federal agencies accountable for achieving program results;
- ❑ Improve Federal program effectiveness and public accountability by promoting a new focus on results, service quality, and customer satisfaction;
- ❑ Improve internal management of the Federal Government.

NASA Strategic Management System

Government Performance and Results Act (GPRA)

PURPOSE (continued):

- ▣ Help Federal managers improve service delivery, by requiring that they plan for meeting program objectives and by providing them with information about program results and service quality;
- ▣ Improve congressional decision-making by providing more objective information on achieving statutory objectives, and on the relative effectiveness and efficiency of Federal programs and spending.

NASA Strategic Management System

Government Performance and Results Act (GPRA)

REQUIRES:

- ▣ **Strategic Plans**
 - describe agency missions & goals
- ▣ **Performance Plans**
 - establish measurable performance indicators necessary to achieve agency goals
- ▣ **Performance Reports**
 - report actual performance measured against the established performance indicators

NASA Strategic Management System

The Strategic Management Cycle

Three phases
in a cycle
based on
the
Results Act

NASA Strategic Management System

NASA Strategic Management Documents

▣ Strategic Management Handbook (*Red Book*)

⇒ 1st Edition - October 1996 - 2nd Edition in Mar. 2000

▣ Strategic Plan

⇒ First GPRA official (1998) - released September 1997

⇒ 1999 Interim Adjustments - released February 1999

⇒ 2000 Full Update - released Sept. 2000 - Next full update Sept. '03

▣ Performance Plans

⇒ FY '99 - released Mar. 1998 - Revised Feb. 1999

⇒ FY '00 - released Mar. 1999

⇒ FY '01 - released Feb. 2000 - Revised June 2001

⇒ FY '02 - released July 2000 - FY '03 - Due Feb. 2002 w/ FY '03 Budget

▣ Performance Reports

⇒ Preliminary Performance Data in Agency Accountability Reports (FY 98 - released Mar. '99)

⇒ First GPRA Official (FY 1999) - released Mar. 2000

⇒ FY 2000 Performance Report - released June 2001 - FY '01 - Due Feb. 2002

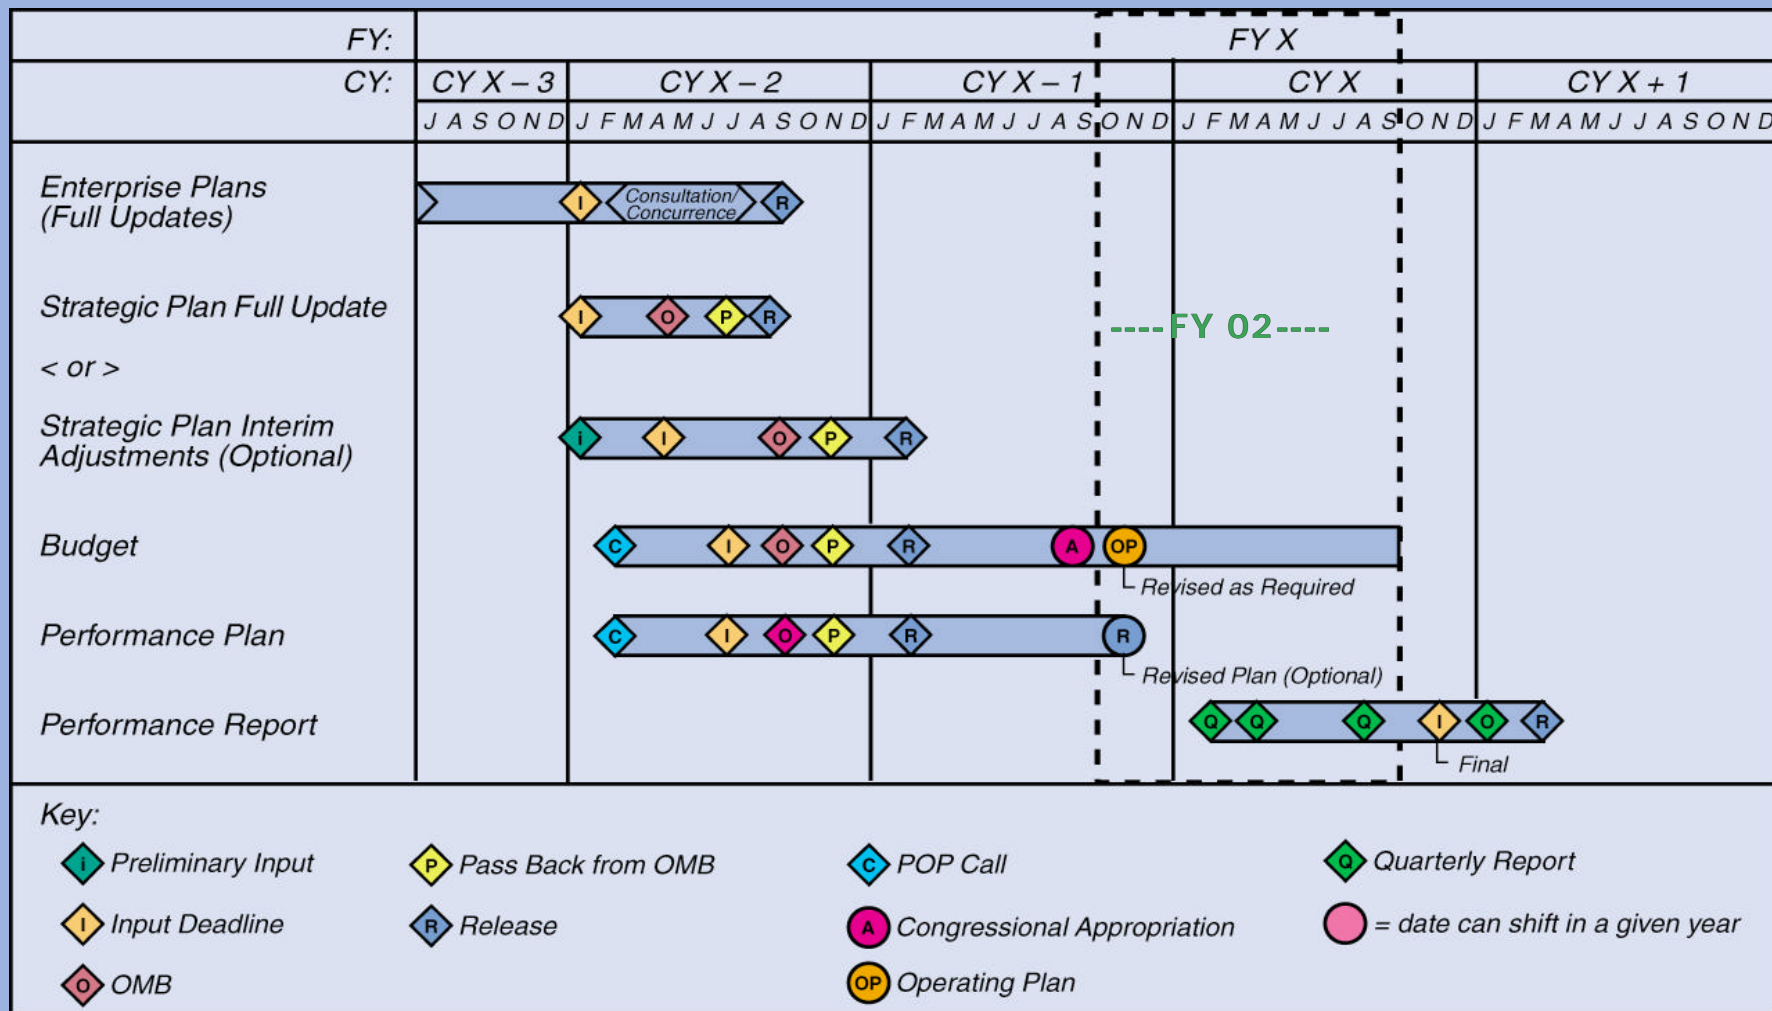

Documents available at : www.plans.nasa.gov

NASA Strategic Management System

The **NASA Strategic Management Handbook** describes how we manage; it lays the foundation for our Strategic Plan, Budget & Performance Plan, Performance Report, and the Agency's lower level planning documents.

NASA Strategic Management System

NASA Strategic Framework

Vision: NASA is an investment in America's future. As explorers, pioneers, and innovators, we boldly expand frontiers in air and space to inspire and serve America and to benefit the quality of life on Earth.

Mission:

To advance and communicate **SCIENTIFIC KNOWLEDGE** and understanding of Earth, the solar system, and the universe.

To advance **human exploration**, use, and development of space.

To research, develop, verify, and transfer advanced aeronautics and space **technologies**.

Strategic Enterprises:

Crosscutting Processes:

- Manage Strategically
- Generate Knowledge
- Provide Aerospace Products and Capabilities
- Communicate Knowledge

NASA Strategic Management System

NASA Enterprise Missions

Space Science

To discover how the Universe began and evolved, how we got here and where we are going, and whether we are alone.

Earth Science

To develop a scientific understanding of the Earth system and its response to natural and human-induced changes to enable improved prediction of climate, weather, and natural hazards for present and future generations.

Biological and Physical Research Enterprise

To use the synergy between physical, chemical and biological research in space to acquire fundamental knowledge and generate applications for space travel and Earth applications.

Human Exploration and Development of Space

To expand the frontiers of space and knowledge by exploring, using, and enabling the development of space for human enterprise.

Aerospace Technology

To maintain U.S. preeminence in aerospace research and technology.

NASA Strategic Management System

NASA Customers and Benefits

The American people are our ultimate customers represented by the Congress and the President.

Through our five Enterprises NASA contributes to National priorities: S&T understanding, Education, the Environment, the Economy, and Exploration

The American people are the ultimate resource provider and the ultimate beneficiaries of investments in NASA's mission of research, exploration and discovery.

Congress and administration decision process responds to the public interest, votes, and funding resources.

NASA Benefits: Create education excellence, economic growth and security, protect the environment, increase the understanding of science and technology, and peaceful exploration and discovery.

NASA Enterprises serve primary customers in science, education, commerce, public policy, and in other Government agencies.

NASA Strategic Management System

NASA Strategic Roadmaps

Summary: NASA High Level Roadmap—Contributions to National Priorities

NASA is an investment in America's future. As explorers, pioneers, and inspire and serve America and to benefit the quality of life on Earth.

innovators, we boldly expand frontiers in air and space to

Agency Mission	Enterprises	Near-term Plans 2000–2005	Mid-term Plans 2006–2011	Long-term Plans 2012–2025	Contributions to National Priorities
 To advance and communicate scientific knowledge and understanding of Earth, the solar system, and the universe	 Space Science Addresses Fundamental Questions 1, 2, & 6	<ul style="list-style-type: none">Study structure of collapsed objects and star-forming nebulae, fine details of microwave background, early formation of galaxies and of stars, dust in other planetary systems, origins of gamma-ray bursts, and the common material between stars.Study Saturn's rings, the composition of comets and asteroids, the atmosphere of Mars, and return dust and solar wind samples.Study the Sun's atmosphere and interior, the interactions between the solar wind and Earth's magnetosphere, and solar coronal mass ejections.Develop advanced technologies in areas such as optics, power systems, sensors, bioassessments, and data storage and return.	<ul style="list-style-type: none">Measure dark-matter, baryon, vacuum-energy densities, and gravitational waves from black holes; determine origin of cosmic rays and the role of active galactic nuclei in gamma-ray background; observe star birth in nebular cocoons; and study the conditions that lead to the formation of Earth-like planets.Learn about formation of the rocky planets, Jupiter's atmosphere, a comet, investigate possible sites on Mars in detail, and set for liquid water ocean on Jupiter's moon Europa.Expand understanding of space weather through solar, radiation belt, and ionospheric mappers. Study the detailed physics and structure of our magnetosphere and the outer solar atmosphere and globally monitor the Sun.Infuse revolutionary technologies into operational missions.	<ul style="list-style-type: none">Resolve the infrared background and an accretion disk around the Milky Way black hole; measure the chemical composition of supernovas and the gas outside our solar system; and determine the prevalence of life-bearing planets around nearby stars.Study Pluto and study Neptune and its satellite Triton. Search for evidence of biological activity on Europa, Titan, and other promising targets. Conduct advanced studies of Mars.Complete our picture of the solar corona and develop an integrated understanding of space weather from a network of spacecraft.Reap benefits of technology investment, including biological, information, and nanotechnology systems, enabling a virtual presence for autonomous scientific discovery.	 Increase the Understanding of Science and Technology
 To advance human exploration, use, and development of space	 Earth Science Addresses Fundamental Questions 3 & 6	<ul style="list-style-type: none">Measure global rainfall, uptake of atmospheric carbon dioxide (CO₂), atmospheric temperature and humidity, cloud properties, global ocean winds, and topography; and produce 3-D maps of the entire inhabited surface of the Earth. Expand use of commercial systems to provide data to the Earth. Expand use of commercial systems to provide data to the Earth.Develop the Earth and space sciences to address key global climate challenges; validate revolutionary technologies and satellite formation flying; and explore new instrument concepts.	<ul style="list-style-type: none">Conduct research to achieve 7- to 10-day weather forecasts. Quantify the global fresh water cycle, variation in terrestrial and marine ecosystems, and forest and ocean carbon stocks.Associate ocean surface winds, tropospheric winds, and precipitation into climate and weather forecasting models.Employ revolutionary computing and data storage techniques for Earth system modeling, implement autonomous satellite control and advanced instruments, and demonstrate a new generation of small instruments.	<ul style="list-style-type: none">Conduct research to achieve 10- to 14-day weather and pollution forecasts, 10-year climate forecasts, 15- to 20-month El Niño forecasts, and 12-month rain rate.Assess sea-level rise and effects and predict regional impacts of decadal climate change.Deploy cooperative satellite constellations, intelligent sensor labs, and advanced instruments for observations from vantage points (L1 and L2).	 Protect the Environment
 To research, develop, verify, and transfer advanced aeronautics, space, and related technologies	 Biological and Physical Research Addresses Fundamental Questions 4 & 6	<ul style="list-style-type: none">Understand the effects of long-duration space flight on human health and the effects of Earth's environment on living and working in space, and develop countermeasures.Begin to conduct scientific and engineering research, and enable commercial research activities on the International Space Station (ISS).	<ul style="list-style-type: none">Understand the effects of long-duration space flight on human health, verify countermeasures, and develop countermeasures.Test and validate technologies that can reduce the overall mass of human support systems by a factor of three (compared to 1990's levels).Expand our understanding of chemical, biological, and physical processes.	<ul style="list-style-type: none">Apply scientific countermeasures for safe, effective, and affordable long-duration human space flight.Test and validate technologies for self-sustaining life support systems that can enable humans to live and work in space and on other planets.Achieve a deep understanding of the role of gravity in complex chemical, biological, and physical processes.	 Create Education Excellence
	 Human Exploration and Development of Space Addresses Fundamental Questions 4 & 6	<ul style="list-style-type: none">Obtain key data on human mission design decisions for robotic science missions and develop technologies, interdisciplinary knowledge, and candidate approaches for human missions beyond Low-Earth Orbit (LEO) with a 5- to 10-fold reduction in costs.Complete ISS development to enable long-duration research.Develop the Earth and space sciences to address key global climate challenges; validate revolutionary technologies and satellite formation flying; and explore new instrument concepts.	<ul style="list-style-type: none">Establish "mission engineering constraints" at LEO and beyond and develop technologies and capabilities for 100-day human missions beyond LEO. Develop approaches to 1000-day missions with 10- to 20-fold cost reductions.Complete research and technology validation including ISS demos of competing technologies for 100- to 1000-day human missions. Operate the ISS to advance science, exploration, engineering, and commerce.Undertake pilot efforts leading to commercialization of ISS operations.	<ul style="list-style-type: none">Develop research and development to enable further 2- to 4-fold reduction in costs for human exploration and complete development of safe, self-sufficient and self-sustaining capabilities for 1000-day class human/robotic missions beyond LEO.Complete the transition of ISS to a customer-driven and commercial operation.Extend scientific discovery on missions of exploration through the integrated use of human and robotic explorers.	 Peaceful Exploration and Discovery
	 Aerospace Technology Addresses Fundamental Questions 5 & 6	<ul style="list-style-type: none">Develop and demonstrate technologies to reduce the aviation accident rate, aircraft emissions, and noise, improve terminal area productivity, support the Federal Aviation Administration's National Airspace System modernization, and develop technologies for general aviation aircraft and infrastructure improvements.Develop processes and technology improvements to support safer crewed launches and reduced cost of launches, and develop advanced space transportation concepts.Develop advanced engineering tools, processes, and design environments, and pioneer basic research in revolutionary technologies such as nanotechnology, information technology, and biotechnology.	<ul style="list-style-type: none">Reduce the aircraft fatal accident rate by 80%, nitrogen oxide (NO_x) emissions by a factor of 3, carbon dioxide (CO₂) emissions by 25%, and aircraft noise by a factor of 2. Double aviation system throughput and reduce inter-city doorstop-to-destination transportation time by 50% and explore integrated supersonic transport designs.Reduce the risk of launch vehicle crew loss by a factor of 40, payload cost to LEO by a factor of 5, and travel time for planetary missions by a factor of 2.Demonstrate advanced design tools, processes, and virtual environments in critical NASA engineering applications and integrate revolutionary aerospace system technologies.	<ul style="list-style-type: none">Reduce the aircraft fatal accident rate by a 90%, NO_x emissions by a factor of 5, CO₂ emissions by 50%, and aircraft noise by a factor of 4. Triple aviation system throughput and reduce inter-city doorstop-to-destination transportation time by 67% and long-haul travel time by 50%.Reduce the risk of launch vehicle crew loss by an additional factor of 10, payload cost to LEO by a factor of 10, and travel time for planetary missions by a factor of 10.Demonstrate an integrated, high-confidence engineering environment and demonstrate new aerospace capabilities and new mission designs in flight.	 Economic Growth and Security

Note:

This is a high-level summary of 25-year plans toward achievement of Enterprise goals and objectives.

For detailed information, see the Enterprise Roadmaps in the Enterprise sections.

NASA Strategic Management System

NASA Strategic Architecture

Enterprises & Crosscutting Processes

NASA Strategic Management System

Performance Planning

7 Characteristics of a Good Metric

- **Represents what program managers "care about"**
 - Should be meaningful -- reflecting NASA's priorities
- **Challenging but achievable**
 - Should involve a stretch element
- **Demonstrate a commitment to goal achievement**
 - Must represent our anticipated annual progress
- **Reflect quantifiable and measurable levels of achievement**
 - What gets measured gets done
- **Verifiable**
 - Must be possible to verify and validate actual performance
- **Relevant**
 - Must demonstrate public benefit
- **Provide Context**
 - Metric achievement must tie in with mission accomplishment

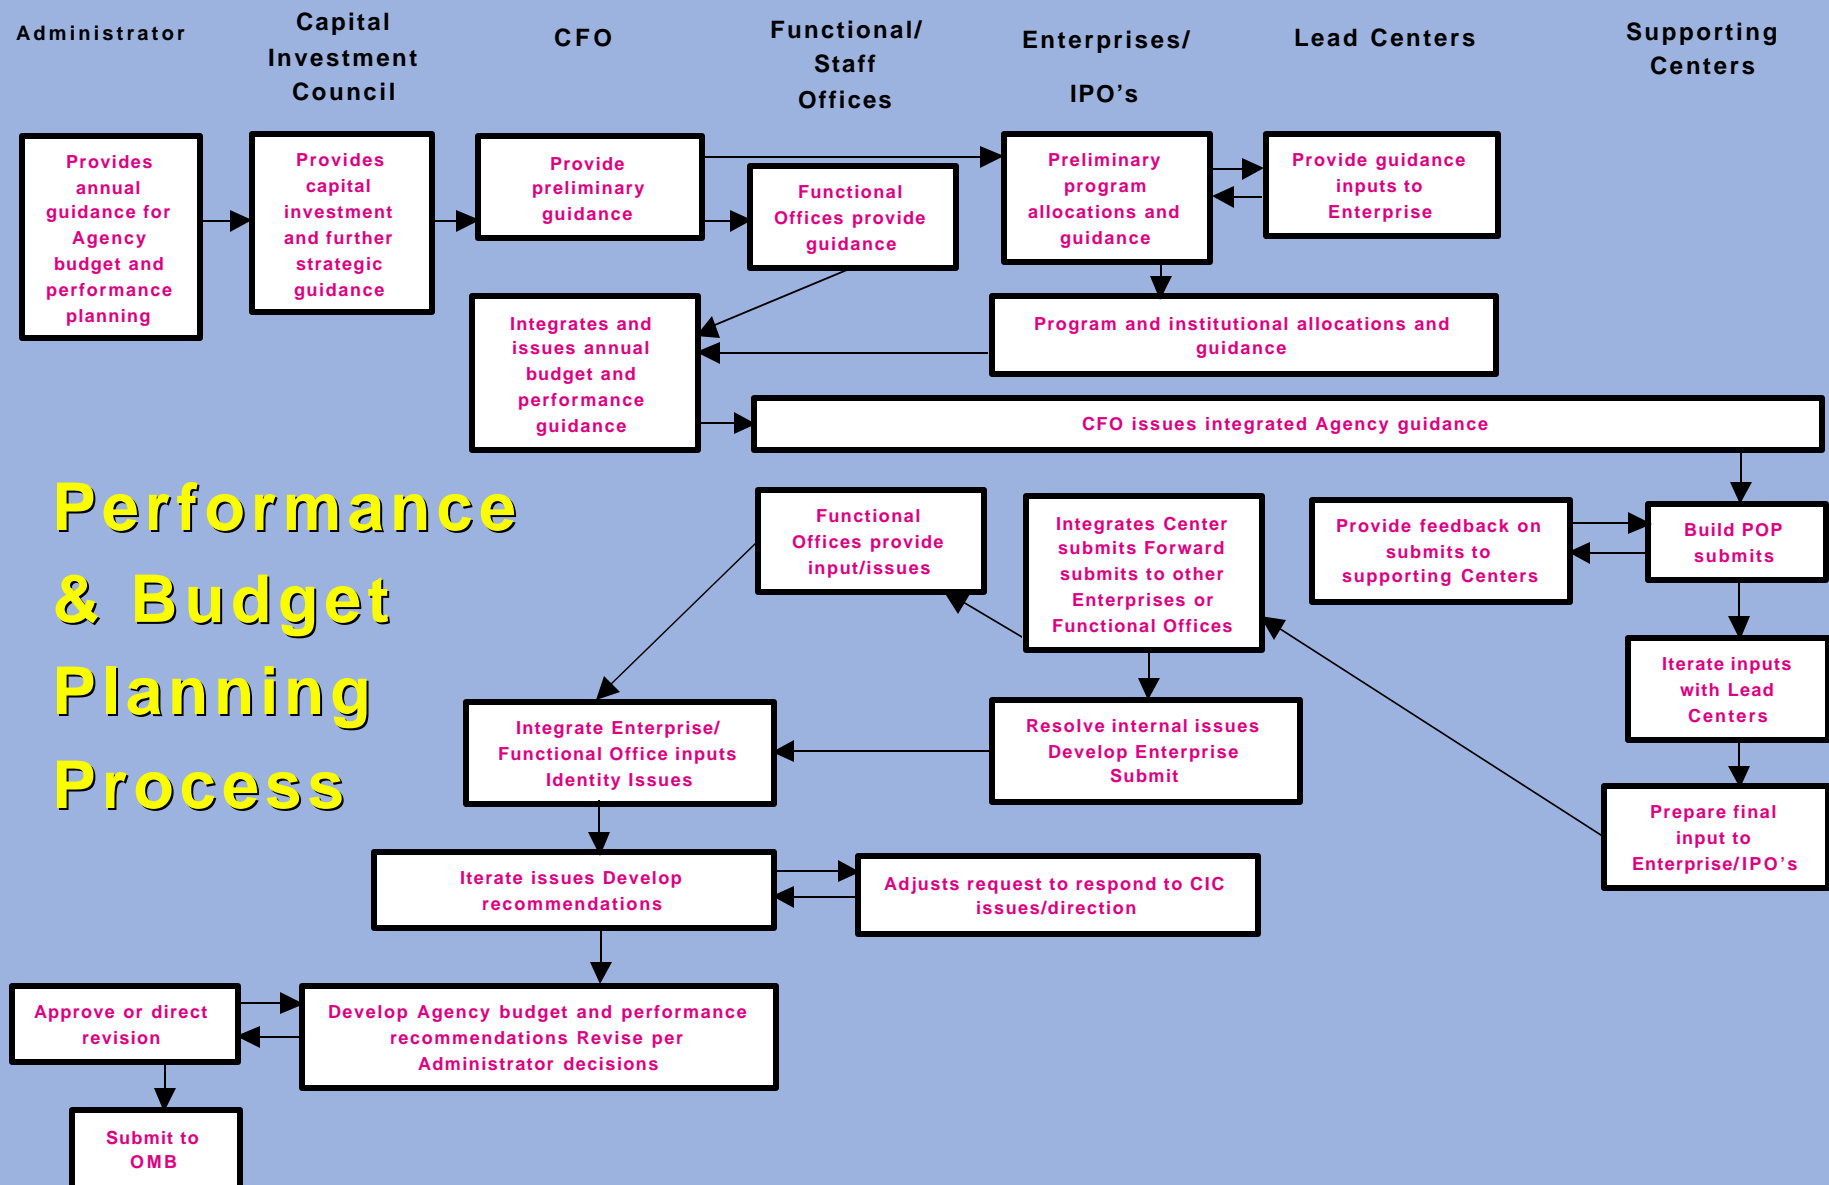

NASA Strategic Management System

Performance Planning Challenges for R&D

- ▣ **Challenge is to develop metrics which provide outcomes as opposed to outputs**
 - Basic research results are difficult to quantify in advance of discovery; may require follow-up questionnaires, surveys, statistics
 - Annual Metrics for multi-year research and development programs are “output” in nature since the program is not mature enough to deliver “outcome” results for several years
 - » Eg. Planetatry exploration missions in transit to their destination; basic research efforts
 - Metrics are developed 12-15 months in advance predicting R&D results
 - » External stakeholders perceive changes at the time of execution as a lack of planning

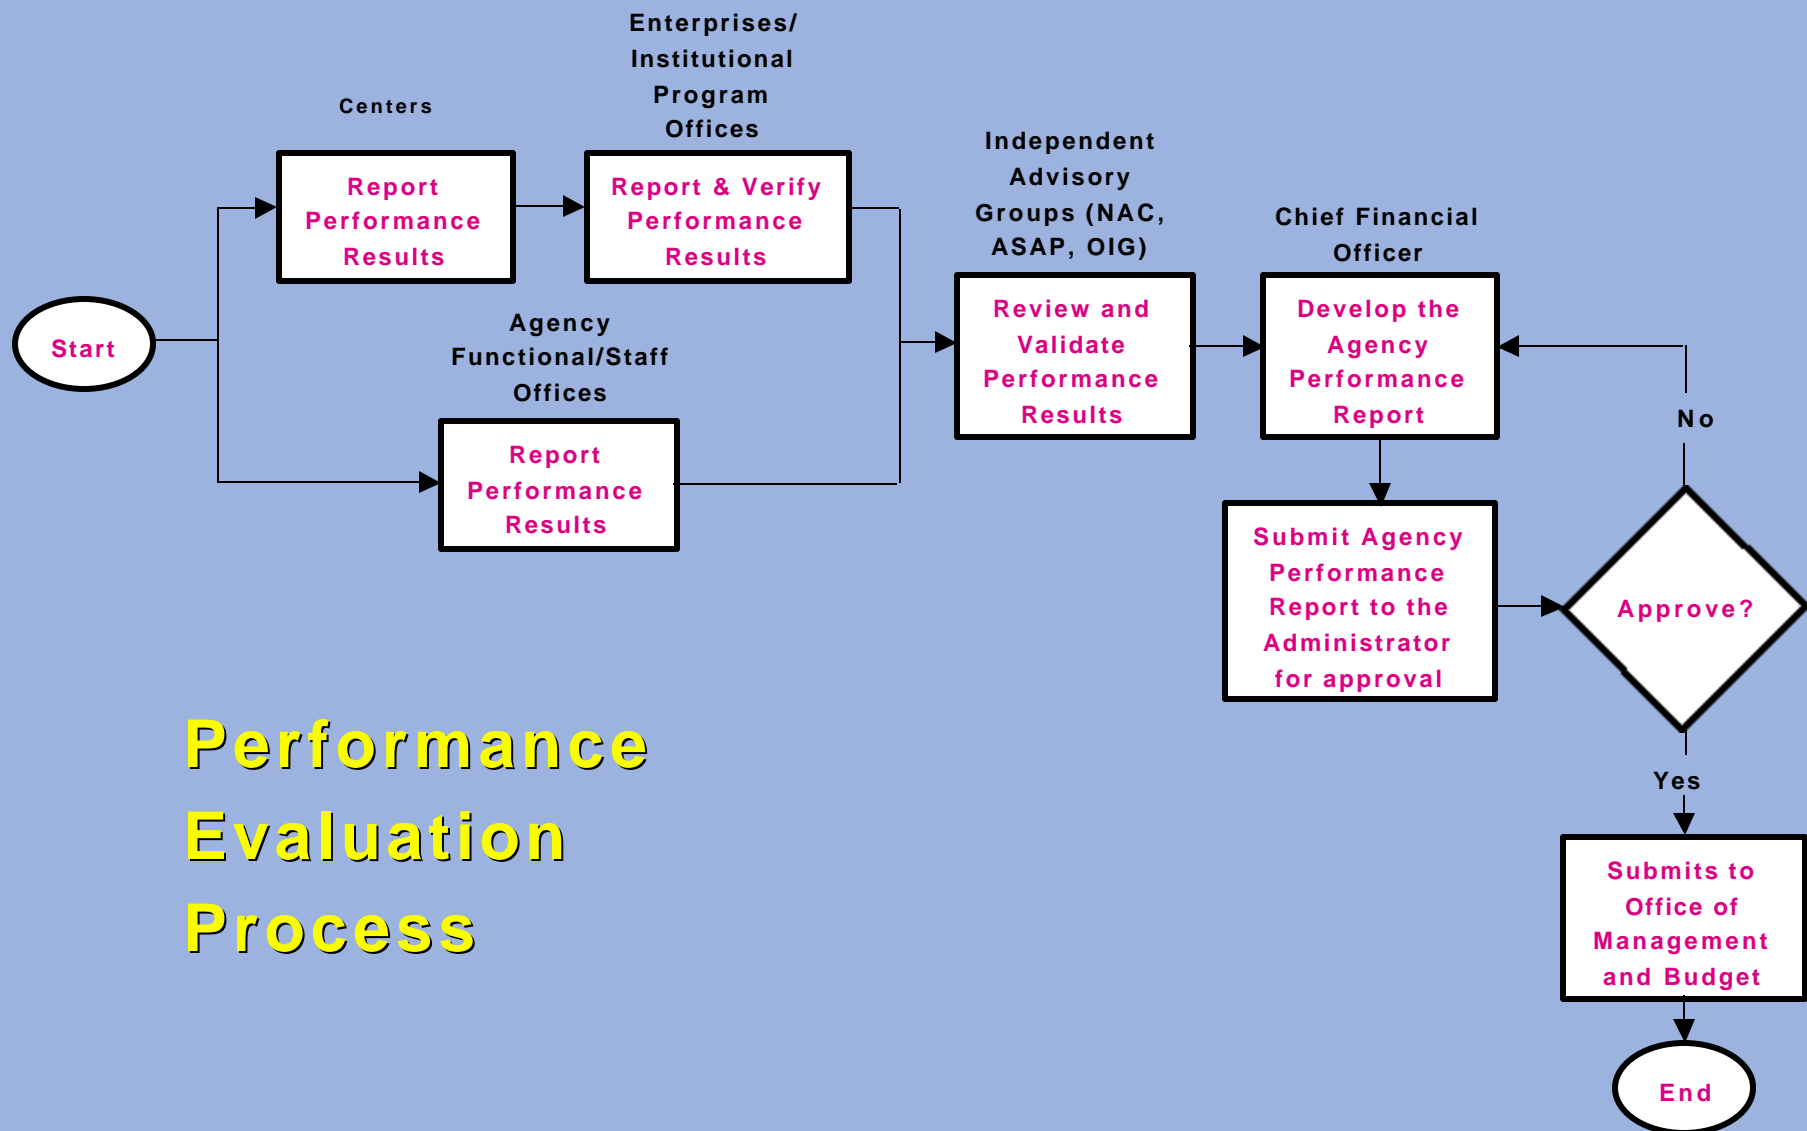

NASA Strategic Management System

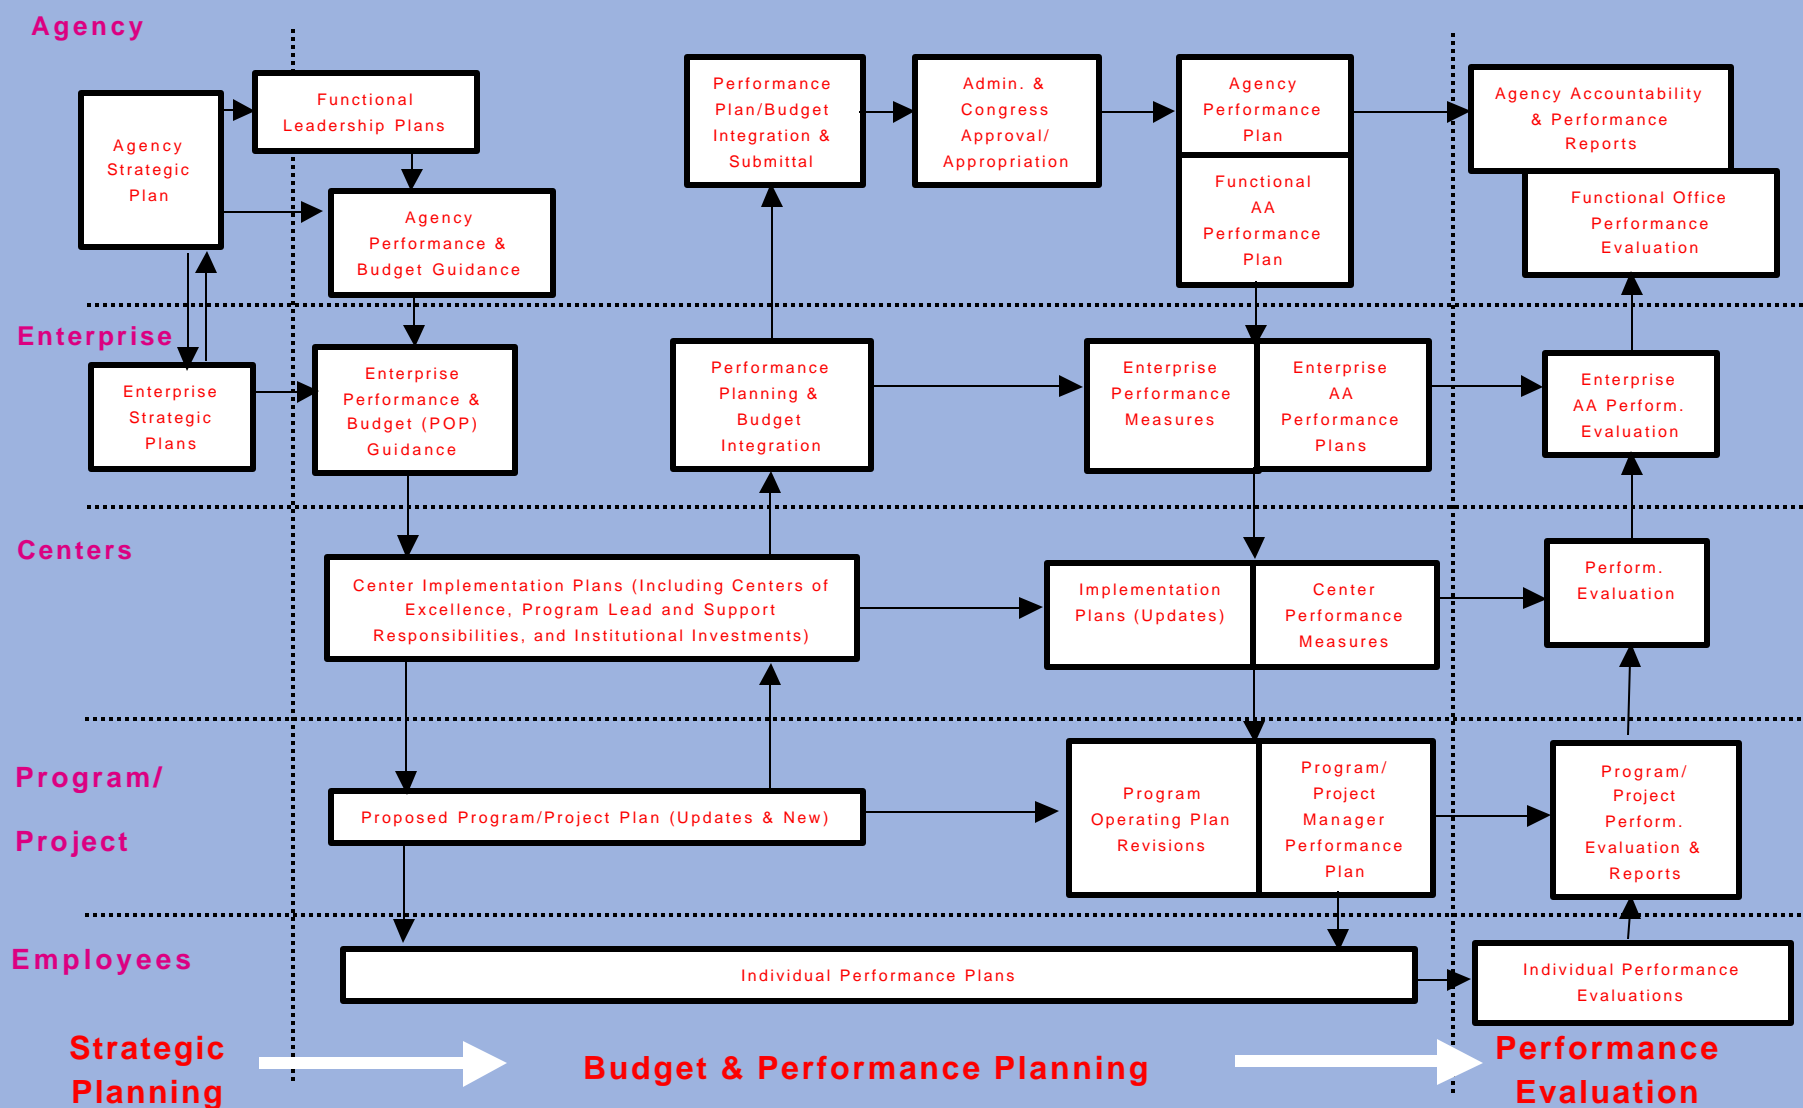

NASA Strategic Management System

NASA Strategic Management System

Strategic Elements by Level & Process

NASA Strategic Management System

Bush Administration Government Reform Agenda

□ Making Government Citizen-centered

- Flatten the Federal hierarchy
- Expanded use of the internet
- E-Government fund to support interagency initiatives

□ Making Government Results-oriented

- Link budget and management decisions to performance
- Ensure financial accountability
- Use capital planning to improve performance, especially investments in information technology
- Eliminate duplicative and ineffective programs
- Expanded use of Performance-based Contracts
- Incorporate successful private sector reforms

□ Making Government Market-Based

- Make e-Procurement the government-wide standard
- Open government to competition

NASA Strategic Management System

Bush Administration Government Reform Agenda

□ FY 2002 Agency performance plans

- Agency-specific metrics
- Also incorporate goals for Presidential initiatives, government-wide, and agency-specific reform proposals

□ NASA specific reform direction

- International Space Station: ensure that future Station costs will remain within the President's FY 2002 budget plan; restore cost estimating credibility
- Space Shuttle Privatization: aggressively pursue privatization opportunities that improve safety and operational efficiency
- Space Launch Opportunities: Space Launch Initiative provides opportunity for industry to meet NASA's future launch needs
- Critical capabilities: develop an integrated, long-term agency plan that ensures a national capability to support NASA's mission -- what capabilities must be retained, discontinued or led outside the agency; expanding collaboration with industry, universities, and other agencies
